DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

None of the prior art of record is seen to disclose or suggest the limitation of claim 1 that said fitting comprising a mounting adapter to be secured to said membrane, a resiliently deformable part associated with said mounting adaptor and arranged to embrace and hold an initially separate insert, in which said resiliently deformable part is a cylindrical element and the initially separate insert comprises a substantially cylindrical portion, wherein the resiliently deformable cylindrical element comprises a sleeve for receiving the insert, said sleeve joined by a radially extending web to an outer cylindrical part of the mounting adapter and the outer cylindrical part is substantially rigid relative to the resiliently deformable part. For example, the closest reference found, Schram, teaches a valve having an outer plate, a flat sealing ring, and an inner plate with a valve body but does not teach said fitting comprising a mounting adapter to be secured to said membrane, a resiliently deformable part associated with said mounting adaptor and arranged to embrace and hold an initially separate insert, in which said resiliently deformable part is a cylindrical element and the initially separate insert comprises a substantially cylindrical portion, wherein the resiliently deformable cylindrical element comprises a sleeve for receiving the insert, said sleeve joined by a radially extending web to an outer cylindrical part of the

Art Unit: 3781

mounting adapter and the outer cylindrical part is substantially rigid relative to the resiliently deformable part.

None of the prior art of record is seen to disclose or suggest the limitation of claim 33 that said fitting comprising a mounting adaptor to be secured to said membrane, an initially separate insert module for mounting in the adaptor, the mounting adaptor having a resiliently deformable part arranged to embrace and hold the insert module in fluid tight engagement with the adaptor when inserted, said resiliently deformable part being arranged for snap-fit co-operation with a correspondingly defined outer profile portion of the insert module to hold the insert module in the mounting adaptor, the arrangement being such that any one of a number of different types of insert module, each having a suitably defined outer profile portion for co-operation with the resiliently deformable portion, can be inserted in the mounting adaptor. For example, the closest reference found, Schram, teaches a valve having an outer plate, a flat sealing ring, and an inner plate with a valve body but does not teach said fitting comprising a mounting adaptor to be secured to said membrane, an initially separate insert module for mounting in the adaptor, the mounting adaptor having a resiliently deformable part arranged to embrace and hold the insert module in fluid tight engagement with the adaptor when inserted, said resiliently deformable part being arranged for snap-fit co-operation with a correspondingly defined outer profile portion of the insert module to hold the insert module in the mounting adaptor, the arrangement being such that any one of a number of different types of insert

Art Unit: 3781

module, each having a suitably defined outer profile portion for co-operation with the resiliently deformable portion, can be inserted in the mounting adaptor.

None of the prior art of record is seen to disclose or suggest the limitation of claim 35 that said fitting comprising a mounting adapter to be secured to said membrane, a resiliently deformable part associated with said mounting adaptor and arranged to embrace and hold an initially separate insert, in which said resiliently deformable part is a cylindrical element and the initially separate insert comprises a substantially cylindrical portion, wherein the substantially cylindrical portion of the insert is provided with a pair of spaced circumferential ribs on its outer surface, the ribs defining a circumferential recess therebetween in which the resiliently deformable cylindrical element of the mounting adapter is received. For example, the closest reference found, Schram, teaches a valve having an outer plate, a flat sealing ring, and an inner plate with a valve body but does not teach said fitting comprising a mounting adapter to be secured to said membrane, a resiliently deformable part associated with said mounting adaptor and arranged to embrace and hold an initially separate insert, in which said resiliently deformable part is a cylindrical element and the initially separate insert comprises a substantially cylindrical portion, wherein the substantially cylindrical portion of the insert is provided with a pair of spaced circumferential ribs on its outer surface, the ribs defining a circumferential recess therebetween in which the resiliently deformable cylindrical element of the mounting adapter is received.

Art Unit: 3781

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
